

ViewNet Systems

Driving the Next Step in Digital Signage

DIGITAL

Large-Format Displays – Dynamic Communication

An LED large-format screen is an effective and economical medium that is easy to control and schedule. It saves both money and resources because you avoid the cost of printed banners and printing ink - a greener solution that makes a difference.

The screen offers flexible and efficient display of messages as an alternative to traditional printed banners and posters. ViewNet's modular system makes it possible to adapt both size and resolution to fit the building, location and task precisely.

Energy-efficient LED screens ensure sharp, high-contrast content, even in bright sunlight. They offer low power consumption, long lifetime and low operating costs - all backed by our guarantee. Content is easily managed via ViewNet CMS, which operates in the cloud and can be integrated with other displays, both from ViewNet and other manufacturers.

The content archive makes it easy to edit content and set the duration and order of spot playback. All ViewNet LED screens automatically adjust brightness according to the light conditions in the area. On/off times can also be tailored to individual needs, and the screens are designed for 24/7 operation.

ViewNet
360° Service

With ViewNet Systems, you get one supplier that professionally manages your entire project - from design and installation to municipal approval and ongoing operation and maintenance.

Project management & planning department
Our planning team ensures that your project runs smoothly from start to finish, coordinating all processes, authority approvals and more.

Product development department
We design and develop exactly the screen solution you need. This includes hardware and software development, mechanical construction and integration.

Production department
We are a make-to-order company, producing anywhere from 1 to 5,000 units. No order is too large or too small for us.

Installation department
Our experienced installation team ensures that your screens are installed neatly and professionally, with all requirements and standards met. Whether you need one screen or several thousand, we handle the job for you.

ViewNet Hotline Support
ViewNet's Hotline Support Department is ready to help with service and support for your screens. This includes everything from content management to screen control.

ViewNet field service team
ViewNet's service team performs annual inspections of your screens. If an incident occurs, we are quickly on site and make sure your screen is serviced without delay.

System operation
ViewNet's IT operation ensures that both screens and Cloud CMS run reliably and without downtime. We provide continuous maintenance and upgrades so your systems are always optimized and ready for use.

Spot production
At ViewNet's graphics department, our professional designers create impressive content designed to maximize your exposure – from static and animated spots to 3D solutions. We can also bring even your boldest large-screen ideas to life.

Content management
If you do not have the time or desire to manage your content, we are happy to take responsibility. Simply tell us where and when the different spots should run.

ViewNet Cloud
V4.0 – Features

ViewNet Cloud CMS System includes built-in **PixelClear** technology, an adaptive AI algorithm developed specifically for Outdoor Large-Format LED Displays to achieve low power consumption, long lifetime and high image quality. The technology is developed with a focus on climate- and energy-friendly LED large-format screens that minimize environmental and climate impact as much as possible.
Best-In-Class

ViewNet's adaptive AI algorithm ensures that you always have the lowest possible power consumption for your spots. ViewNet's content management reduces your power consumption by **30-80%**.

ViewNet Cloud V4.0 – Features

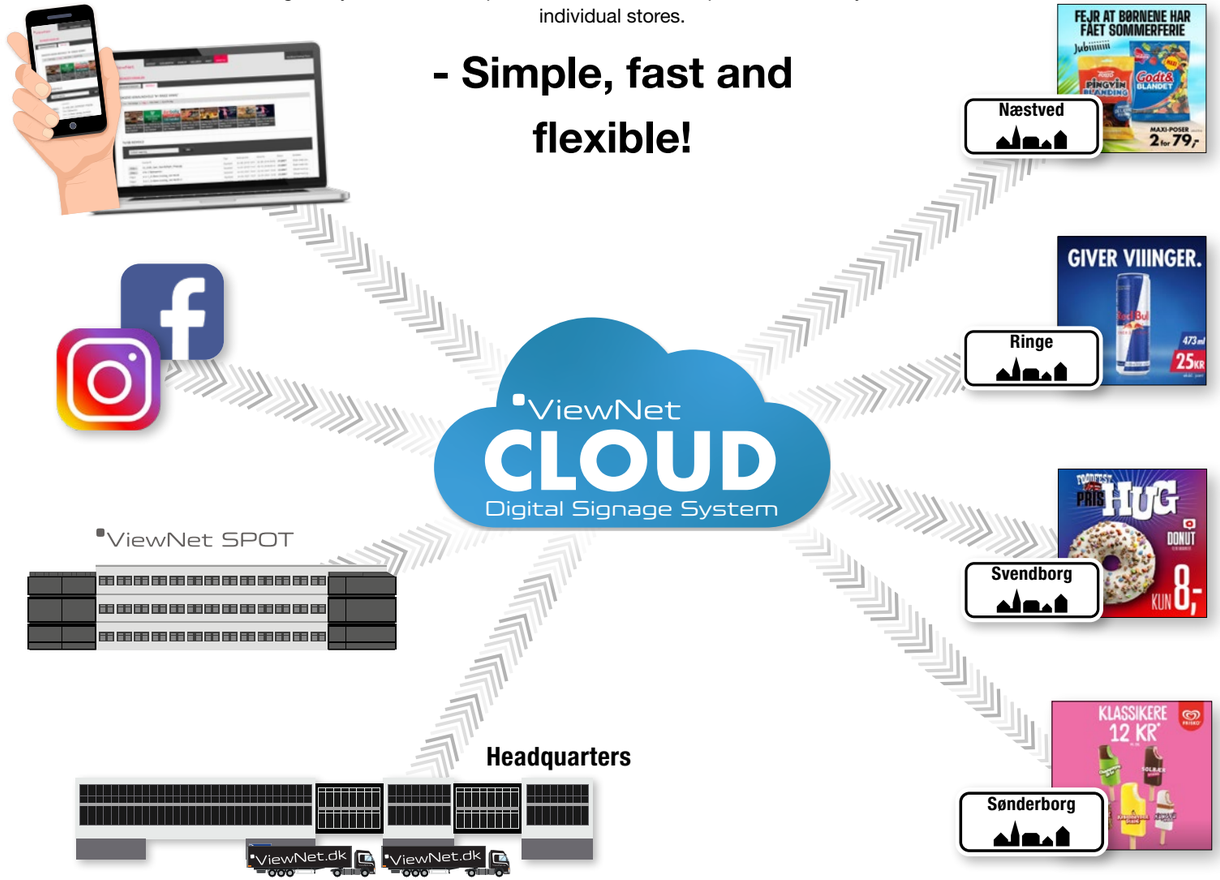

- Create and edit content in the system.
- 20 different primary design templates for each design layout. Can be expanded without limitation - V2.0 - New
- Many base layouts available - V2.0 - New
- Corporate design layout adapted to the individual customer.
- Transparent design templates with free choice of colours
- Dynamic distribution of content to screens.
- Dynamic control of publication times by date, time and location.
- Automatic repeat function, so content can, for example, be shown every Friday from 12:00-18:00 (GOOD WEEKEND) - New
- Content preview, so content can be seen “live” before publication.
- Spot counting function. The system automatically counts the number of views for a given period for billing purposes - New
- Adaptive PixelClear function - lower power consumption and extended screen lifetime - V2.0 - New
- Wayfinding display function. Automatically controlled and can also be integrated with other systems.
- Calendar display function.
- RSS display (news feed).
- Built-in media archive.
- Video playback.
- URL / HTML display - New
- YouTube video display / integration - New
- Instagram photo and channel display / integration - New
- Automatic scaling of images and video.
- Focal points so the system can automatically crop images, if desired.
- Monitoring of all screens with operating status display.
- Now with email support - New
- Multiple language handling - V2.0 - New
- Content sharing with other customers.
- Free division of the number of screens.
- Automatic merging of multiple channels to the same screen.
- Multichannel support. Can display several channels at the same time on the same screen.
- SMS and smartphone integration.
- Integration from different external systems.
- Optional ready-made content channels, e.g. Panorama photo channel.
- Very user-friendly and simple operation focused on daily use. Fast and efficient - now made even simpler - New
- VIP and Alarm channel priority display.
- Ability to run content on both interactive/touch and passive screens.
- User rights management. Each user has individual read, write and delete rights in the system.

Full control

We offer one of the market's most user-friendly cloud-based CMS content management systems, including monitoring and media library.

The system makes it easy to control and schedule content - both locally and globally. You can also upload content from headquarters or directly from the individual stores.

- Simple, fast and flexible!

Super Black Panels with adaptive PixelClear - only at ViewNet!

Higher contrast, lower power consumption and longer lifetime

A green solution that saves money

ViewNet's LED large-format screens are among the most climate- and energy-friendly on the market, with minimal environmental and climate impact. Over time, the power savings compared with a conventional LED large-format screen correspond to approx. 42% of the screen purchase price. A large-format screen from ViewNet is therefore a gain for both the environment and the economy.

The combination of our Super Black LED panels and PixelClear software makes images appear sharper and more saturated, while allowing brightness to be reduced. Lower brightness, together with the UV-protected Super Black diode, results in both lower power consumption and longer screen lifetime.

ViewNet's **Super Black** panels were developed in collaboration with:

SDU University of Southern Denmark · energy cluster denmark · Erhvervsstyrelsen · syddansk vækstforum · clean innovating green solutions · Den Europæiske Socialfond · Vi investerer i din fremtid

ViewNet **Super Black** LED Panels

The challenge:

It is a well-known challenge that direct sunlight can make it difficult to create a colourful, high-contrast image on an outdoor screen. To compensate, brightness is increased, which raises power consumption and affects diode lifetime. Direct exposure to UV rays also contributes to diode wear.

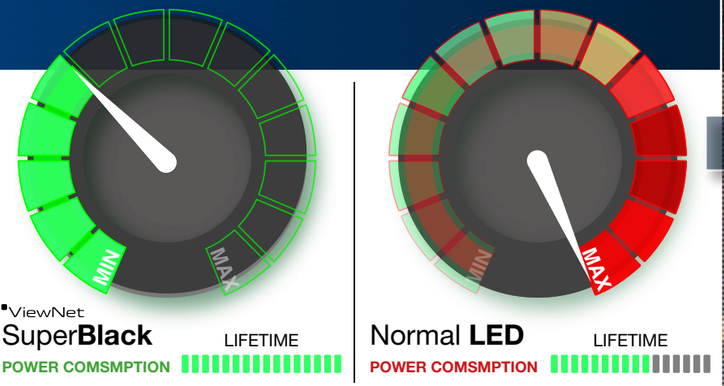

The solution:

With ViewNet Super Black LED and adaptive PixelClear, much higher contrast is achieved in sunlight, making images clearer and more saturated. Brightness can be reduced, lowering power consumption, while reduced UV exposure extends diode lifetime.

In direct sunlight, **Super Black** delivers a better image with:

- Significantly higher contrast
- Richer, more saturated colours - without washout
- 30-60% lower power consumption
- Better protection and longer screen lifetime

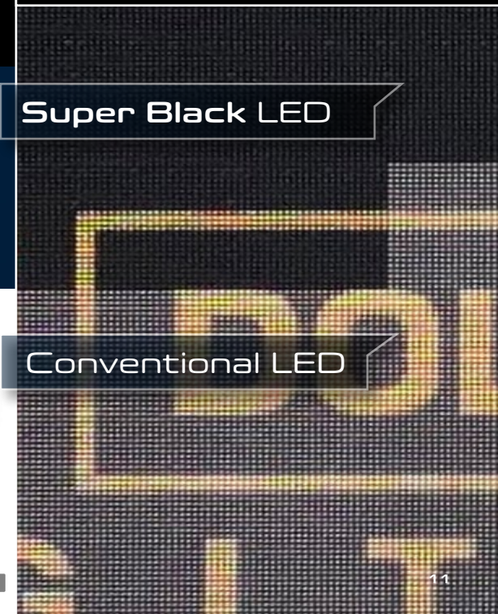

Super Black with adaptive PixelClear is ViewNet's latest initiative to secure the best possible image quality with the lowest possible energy consumption and therefore the lowest possible environmental impact.

Dynamic Visibility. Driving Results.

Transform your forecourt into a high-impact sales channel.

Upgrade your price sign to a dynamic marketing platform with ViewNet Digital LED. We help you capture attention and increase the average basket size of every customer.

Maximize Every Visit: Combine crystal-clear fuel pricing with high-resolution promotions for your car wash, bistro, and kiosk. Turn a quick fill-up into a full-service stop.

Operational Agility: Update prices and campaigns in seconds via our cloud-based CMS system — no manual labor, just real-time response.

Engineered for Efficiency: Crystal-clear visibility in direct sunlight with market-leading power efficiency.

Seamless Integration: Flexible solutions designed to fit new builds or retrofitted existing pylons perfectly.

Lower costs. Increase footfall. Future-proof your station. We provide the total package: construction, lifetime service, and optional content management.

One screen. Endless possibilities.

Don’t settle for static. With ViewNet, you can update your screen dynamically to reflect your station’s changing priorities. From live pricing to bistro deals – show exactly what you need, when you need it.

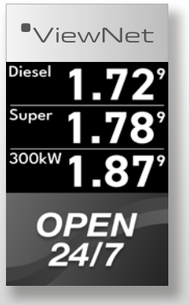

ViewCharge Design Examples

Elevate your brand visibility with a wide variety of high-quality signage options, tailored to fit your specific needs.

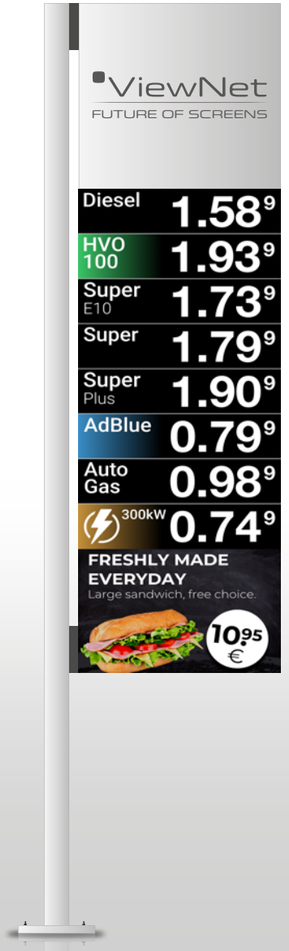

From iconic pylons that capture attention at a distance to specialized EV charging totems designed for the future of mobility, we provide end-to-end solutions for every site. Whether you are looking to build from scratch or optimize costs through a sustainable Retrofit of existing structures, our expertise ensures a seamless integration.

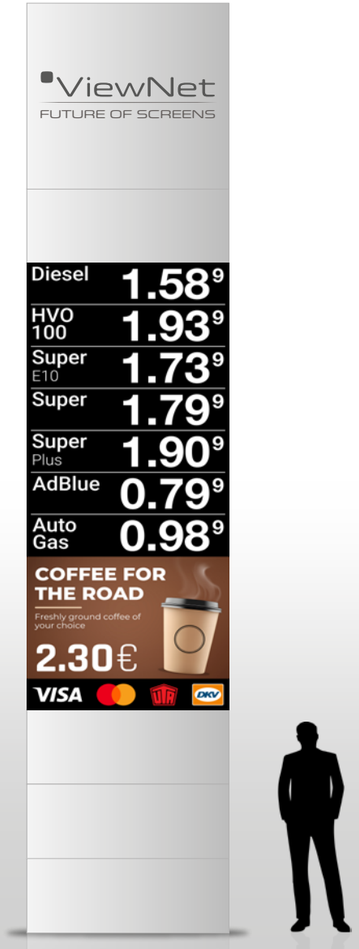

Your vision, our expertise — customized to perfection.

E-Mobility Pylon

Dedicated signage solutions for identifying and branding electric vehicle stations.

Wall-mounted display

Dynamic digital wall displays designed to drive sales through localised messaging.

Pylon

Freestanding roadside structures displaying fuel prices and primary brand identity.

Flag sign

High-impact signage projecting from masts to catch fast-moving traffic.

Retrofit

Cost-effective brand updates using existing structures with new components.

OUTDOOR - LED SCREENS

Did you know that ViewNet Systems Info LED pylons are the slimmest on the market and can be designed in your company brand colours? They can be delivered with your logo on the cabinet, or on a fantastic illuminated cube on top.

The Topcube ensures optimal visibility and profiling, even from a very long distance. All this in solutions that are unique to a ViewNet Info LED Pylon.

LED-Topcube

With an illuminated LED Topcube, you are assured of high recognition when darkness falls, even from a very long distance.

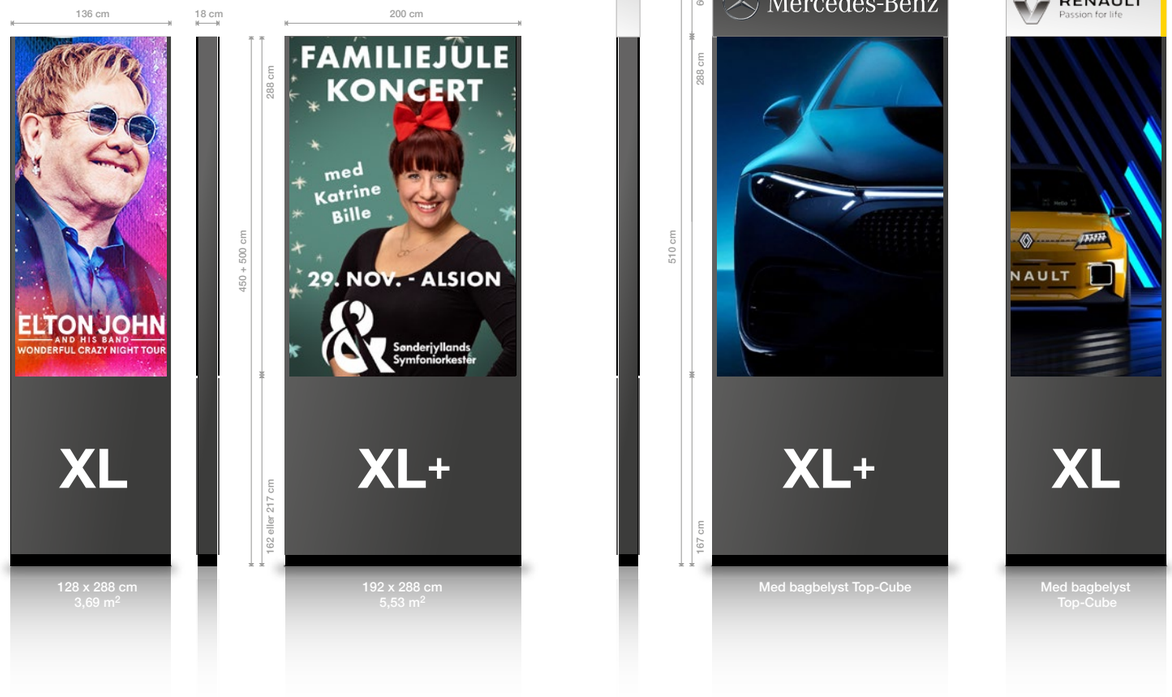

The cube can be adapted to the company colours and supplied fully illuminated or with cut-out, backlit logos.

ViewPylon variants

ViewNet Info LED pylons are tailored precisely to your needs - from compact models to large formats with razor-sharp screen resolution. The slim and robust construction can be fully customized with your own colours, logo and optional illuminated Topcube.

Size and resolution

ViewNet offers a wide range with a total of 160 variants in size and resolution. We provide some of the market's highest resolutions at the best prices.

True pixel pitch on the pylons: 4, 5, 6, 8 and 10 mm.

Construction

ViewNet's pylons are among the slimmest on the market and are available with both single- and double-sided LED screens.

The pylons are highly reliable, and their strong, waterproof construction ensures stability in storms and performance in the humid Nordic climate.

Customer customization

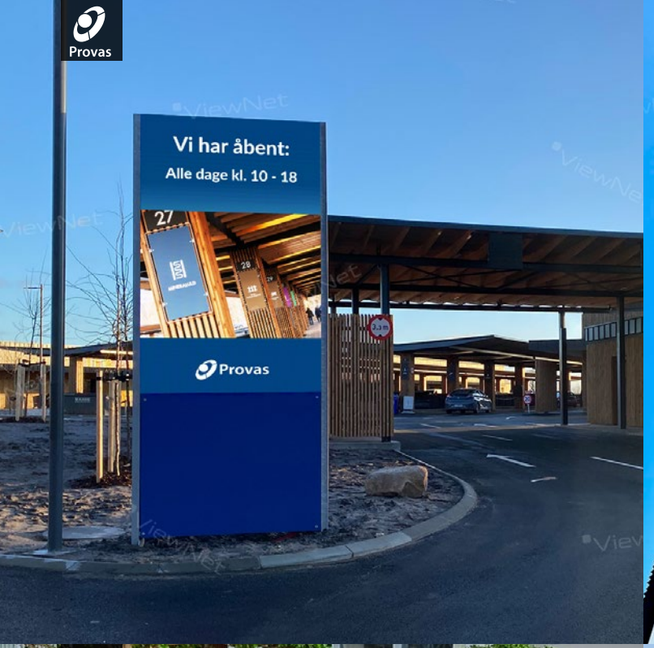

ViewNet LED pylons can be customized to your exact wishes in terms of colours and form.

In exposed locations, ViewNet Hard Cover can be installed as an effective shield that protects the LEDs from heavy stone impact and graffiti.

Connectivity etc.

ViewNet's stable 4G/5G data connections make it easy to install the pylon. The only connection required is power.

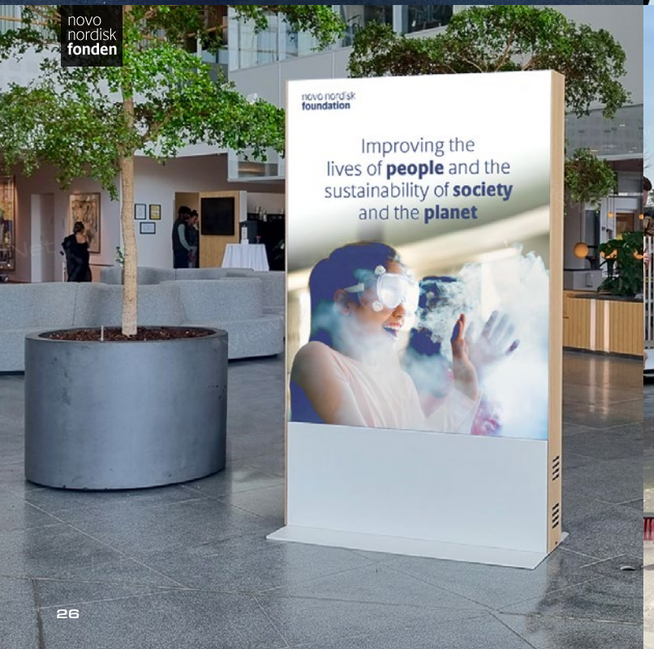

All pylons are supplied with a legally required light sensor that automatically regulates brightness to the desired level.

OUTDOOR - LED SCREENS

Become more visible in the city with a digital advertising screen on the facade, and increase attention around your messages and current offers with a modern, digital solution. Show multiple differentiated messages on one LED sign and clear away the old sign clutter.

With a digital screen, you can quickly and easily change current messages and images. ViewPoster can display content from a URL, and the content can easily be adapted to your exact user interface

ViewPoster
Frame Edge design

ViewPoster screens are available with or without our Frame Edge design, a 4 cm wide metal edge that gives the screen a floating look on the wall. The frame can of course be supplied in different colours.

ViewPoster screens are available in different sizes and resolutions and can be adapted precisely to your desired placement.

ViewPoster variants

Our square ViewPoster facade screens are available in several sizes, from 110 cm and upwards. The most popular models are 160 x 160 cm and 200 x 200 cm.

We offer attractive rental and leasing solutions, so you can get started with your own ViewPoster facade screen quickly and economically. Contact us to hear how we can help with a tailored solution.

ViewPoster 110 | ViewPoster 135 | ViewPoster 170 | ViewPoster 200

Size and resolution

ViewNet offers a comprehensive range of screens in different sizes and resolutions. We have some of the market's highest resolutions at highly competitive prices.

Our pylons are available with true pixel pitch of 4, 5, 6, 8 and 10 mm, ensuring sharpness and detail of the highest quality.

Construction

ViewNet's ViewPoster is one of the slimmest facade screens on the market and is available as both single- and double-sided LED screens.

ViewPoster is known for high operational reliability, and the robust, waterproof construction keeps the screen stable even in stormy weather and enables it to withstand the humid Nordic climate.

Mobile solutions

If you do not have a suitable wall for mounting a facade screen, we also offer a mobile solution with screens that can easily be moved and positioned exactly where you need extra attention - both indoors and outdoors.

The screens simply connect to a power source and are then ready to display your content.

The mobile solution includes:

- 1 high-resolution mobile ViewNet screen with adaptive PixelClear and SuperBlack LED technology
- Reinforced frame with wheels or pallet base
- A mini player (PC) and an LED controller
- Automatic real-time brightness adjustment
- CMS content management system
- WiFi / 4G

Customer customization

ViewNet's ViewPoster can be tailored precisely to your wishes, both in terms of colour and design.

In exposed locations, ViewNet Hard Cover can be installed. This protective shield effectively protects the LEDs from heavy stone impact and graffiti.

Connectivity etc.

ViewNet's stable 4G/5G data connections make installation simple - the only connection required is power.

All ViewPosters are supplied with a legally required light sensor and automatic brightness regulation, ensuring optimal visibility under all conditions.

ViewPro

OUTDOOR - LED SCREENS

ViewNet Systems' outdoor LED large-format screens are designed to operate in all weather conditions - day and night, all year round. Our screens are already installed and tested in many places, from Arctic regions to sunny deserts, and we stand 100% behind their quality.

Our screens are optimized to deliver crystal-clear images under all conditions. With our SuperBlack design, you get one of the market's best images even when the sun is shining directly on the screen - all with low energy consumption.

The most popular screen formats are 16:9 and 21:9 widescreen, but of course we also offer custom solutions that fit your exact needs - with resolutions up to 8K.

FACADE SCREEN

The screen is mounted directly on the wall and can either be recessed for a discreet appearance or mounted floating with backlighting, creating an impressive WOW effect.

We are proud to offer some of the market's slimmest screens, adding a stylish touch to any facade.

FREESTANDING

A freestanding LED large-format screen can be mounted on a steel structure, trailer or concrete base for maximum flexibility and easy relocation.

Our smallest screens start at just 32 x 32 cm, and the size can be adapted to the location and need - only the imagination sets the limit.

ROOF-MOUNTED

LED large-format screens integrated into roof structures are becoming increasingly popular in cities, where their visible position ensures high exposure to thousands of people every day.

We have extensive experience integrating screens into historic buildings and the architecture of newly built prestige projects.

Zero reflection - second to none picture quality

ViewStudio screens deliver outstanding image quality and performance, without the distracting reflections often seen on LCD and QLED screens in bright rooms.

With impressive colour depth and deep blacks, V**iewStudio** screens offer crystal-clear images and an exceptional level of detail. Their extreme viewing angle surpasses all existing screen technologies.

ViewStudio PRO
- high performance for professional use

The new screen control software integrates design, control and monitoring on one platform. This is a professional LED solution with outstanding image quality, precise colour adjustment and an intuitive software experience.

The solution is ideal for advanced applications such as fine-pitch LED installations, TV studios, tours, corporate events, virtual production and e-sports. ViewStudio Pro supports **2K, 4K, 5K and 8K** resolutions.

Video conferencing system

ViewStudio screens are prepared for this integration, and we can deliver the complete solution for creating impressive online meetings.

2.5W

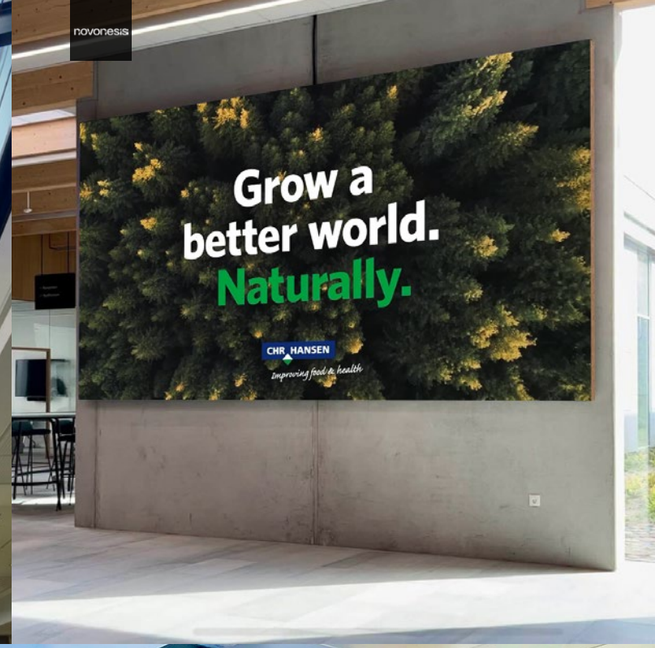

APT 2.5W
Automatic power-saving technology

If no input signal is received for a period of time, the screen switches off automatically. This reduces the screen's total power consumption to just 2.5 watts per hour.

When the signal is connected again, the screen switches on automatically in just 2 seconds.
